

## ASSIGNMENT-1

### INTERNET AND

### WEBSYSTEMS

In last class one of my classmates raised the topic about online groceries shopping application. with the advancement in technology and science, people can do various things at the comfort of their homes and one of such things is online shopping. We have different types of groceries in that application difficult to find the groceries in that time have voice option for looking at the groceries. And previously purchased data is recommended for the user in that application we can easily identify and easily ordered. The applications should contain more advertisement's about the application that can options can available as a user's can aware the options.

2.For example, we can listen the music(spotify) in application it can contain advertisements in that time users can buy the premium is it best for the user and developer, user can use the application without adds, at that time developer has benefit can user buy a premium. Which means at times we may face conflicting loyalties between the personal benefits for everyone. this is where a conflict of interest may pop up, where your private interests compete or even appear to compete with interests.

3. I can connect this application because it recreates the mind easily and, in that application has a lot of elements that make it really appealing particularly different kinds emotional songs like party songs, sad songs, happy song.....we can capture our interests.

**4. I would like to create an application Can be used in multiple e-top up stores for recharging.**

1. Online mobile recharge is a web-based application. It can be developed in ASP.NET.

It is used as to Recharge mobile phones. Also developing Ui technology. The app performing Based on backend Technologies.

2. The project main concept is easy to communicate between the user and developer. And without buying recharge card. By using this app display the plans and prepaid and postpaid Mobile bills from anywhere and anytime. Using the online application, the Developer can add new operators, tariff plans, offers.

3. It roots out of the manual card system of recharge and introduces a new and genuine online Recharge process. There are no fake plans because the developer is used to High-secure coding. It helps the users in creating their account, and then recharging the mobiles phones at any time.
